

GOING GREEN WITH NIGEL B DESIGN

Our Energy Efficient Amplifiers are guaranteed to save you money

WHY NIGEL B DESIGN AMPLIFIERS ARE VERY EFFICIENT

The first thing you will notice is the absence of an On/Off Switch. This is no accident. By incorporating an Automatic On/Off Circuit which we call ADC, the need for a Power Switch becomes unnecessary., it also saves Energy.

ADC is an Automatic Function that switches our Amplifiers On in 2 Milliseconds and Off within 15 seconds or continues to cycle the Amplifier's On condition while Audio is present

Automatic Detection Circuit

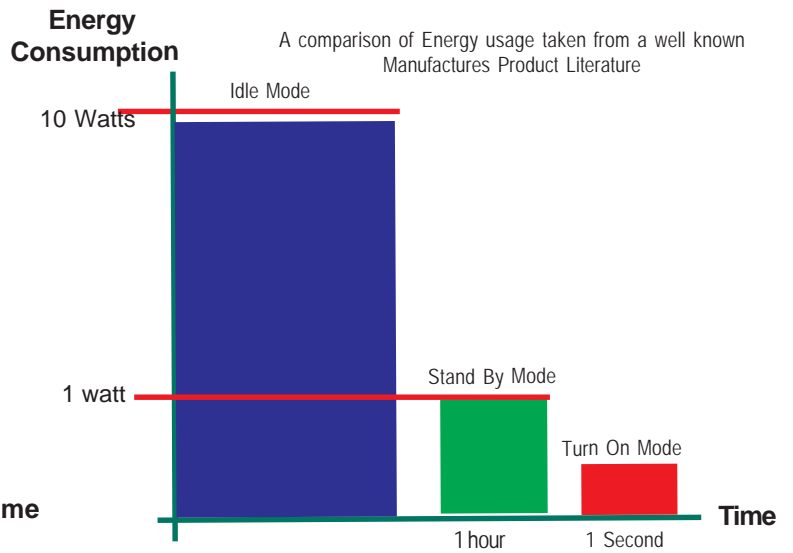

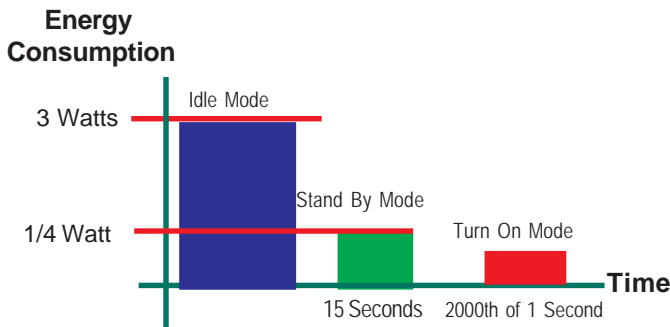

This reduces Energy Costs at the same time the Amplifier gives you superior Sound Quality, Nigel B Design's ADC Circuit makes our Made in America Amplifiers most probably the most Energy Efficient around.

COMPARE THE DIFFERENCE

We took one of our competitor's popular Amplifiers to see how we compare - the results speak for themselves.

NIGEL B DESIGN AMPLIFIERS

Figures taken from Energy Star Test results

Nigel B Design Amplifiers go from "in use" to Idle Mode in ONLY 15 seconds using 3 Watts or 3 BTUs. In Stand By mode consumption drops to 1/4 of a Watt.

Nigel B Amplifiers "Turn On" time of 2000th of a seconds will always eliminate Audio Clipping.

THE THOUGHT BEHIND NIGEL B DESIGN ENERGY EFFICIENT AMPLIFIERS

Five years ago I decided to make all my Amplifiers Energy Efficient, so I developed the Automatic ADC Circuit which is incorporated into my entire Product Line. Nigel B Design Amplifiers exceed the Energy Star specification requirements Version 2 for both Commercial and Residential Use. So, if you are looking for Energy Efficient Amplifiers, Nigel B Design's, Made in the USA Amplifiers should be your first Choice.

Designer, Nigel B Design, Inc

All are available with Energy Efficient World Wide Auto Sensing 110-240v Power Supplies

We reserve the right to make Specification and Improvements without notice
